**ITEMS NEEDED:**
Four dozen eggs  
A tarp  
Towels and wet rags (just in case)

*Note: You can read further instructions and see a demonstration of this science experiment at the link below.*

https://www.stevespanglerscience.com/lab/experiments/walking-on-eggshells/

**Directions:**

Open the egg cartons and set them on stage in a staggered pattern, left and right, so that a child can easily walk across them.

Choose one or two volunteers. Have them remove their socks and shoes. Explain to them that in order to do this science demonstration, they must put their whole foot on the eggs, not just step with toes or heel, and stand on the eggs.

*Have an adult leader stand by to hold each student’s hand as they walk across the eggs.*

**Message:**

Peter once walked on water just like we walked on these eggs. He bravely stepped out of a boat and walked on top of the sea to Jesus. He wanted to be brave, willing to stand up for Jesus, but when the moment of truth came, he let fear get the best of him.

Don’t let fear get the best of you. Remember that God can give you courage to stand up for him and do the right thing. Ask God to make you brave when you are afraid. Give him your fear and he will give you courage to stand for what’s right.

We don’t have to be afraid. We have Jesus, and he will make us strong!
