

SCIENCE LESSON

ITEMS NEEDED:

- A hard boiled egg (cracked and peeled)
- An old milk bottle
- Matches
- A strip of paper

Note: You can read further instructions and see a demonstration of this science experiment at the link below. An alternative version using a smaller bottle and a water balloon is also shown.

<https://www.stevespanglerscience.com/lab/experiments/egg-in-bottle/>

Directions:

Select an egg for the experiment that is slightly larger than the mouth of the bottle.

Grease the top of the bottle with a little vegetable oil.

Light a few strips of paper on fire and quickly drop them down into the milk bottle.

Cover the top of the bottle with the egg quickly, sealing the bottle, then wait. As soon as the flames go out, the change in the air inside the bottle will literally suck the egg inside the bottle.

Today we are talking about praising God. What does praise have to do with an egg and a bottle? Nothing really, but this egg and bottle are a reminder of one of the big reasons we praise God. It seems impossible for an egg larger than the mouth of the bottle to enter this bottle, but that's what happened. It once seemed impossible for us to get to Heaven. We are all sinners, and we've been separated from God. But Jesus came to save us from our sins and open the doors of Heaven.

Our God is a God who can do the impossible, and Luke 1:37 reminds us nothing is impossible with God. Let's praise God for doing the impossible and saving us from sin.
